

GreenWise Announces Availability of VersiFloor

Another GreenWise Sustainable Building Solution

Midrand — 17 May 2018 — Today at the Africa Construction Expo 2018, GreenWise announced immediate availability of VersiFloor, an innovative floor system that offer permeable paved flooring with the option to integrate a water storage tank under the permeable paved floor.

“VersiFloor was developed to offer customers an alternative water storage space under tiled or paved outdoor areas by combining a raised permeable floor with an underfloor rainwater storage tank. GreenWise believe that it is essential to offer our customers multiple options for integrating rainwater storage into new housing and commercial building designs and these options offer architects and engineers more options to do so” said Johan Schalkwyk, CEO at GreenWise.

Positive Customer Impact

GreenWise is using its KEOPE K2 high quality outdoor tiles and pavers to enable the installation of a raised VersiFloor which can then be install on top of the GreenWise VersiTank system. This enables GreenWise to offer our customers the best quality, permeable, full body porcelain flooring system available in South Africa.

VersiFloor Availability

VersiFloor is ready for deployment and GreenWise can be contacted for design assistance as well as recommendations for installation contractors in your area.

Founded in 2008, GreenWise specialises in providing GREEN solutions and offers a wide range of products to assist Architects, Engineers, Business and Home Owners.

GreenWise and VersiFloor are registered trade names in South Africa
